Preparedness Roundtable Releases Report

Preparedness Leadership Council (PLC) Releases Report Summarizing Discussions Held At “Explosives ‘Left of Boom’” Roundtable

The roundtable, of which QuickSilver Analytics was a participant, discussed a variety of topics including preparing for and preventing domestic terror attacks, and the inherent difficulties of gathering intelligence while also protecting privacy.

Belcamp, MD October 17, 2014: The Preparedness Leadership Council (PLC) has released a report detailing the discussion held at their 12 June 2014, roundtable event “Explosives ‘Left of Boom.’” QuickSilver Analytics is proud to have underwritten and participated in this event, and hopes that the ideas presented will strengthen and enhance current terror prevention techniques at home and abroad.

From the PLC:

“The Preparedness Leadership Council International (PLC) hosted a roundtable discussion in Washington, D.C., at the United States Park Police Anacostia Operations Facility. Charles Guddemi, a federal law enforcement officer, led the discussion... which addressed topics related to preventing, detecting, and deterring incidents involving improvised explosive devices (IEDs).”

From Charles Guddemi, in his forward for *Explosives “Left of Boom”*:

“[Explosives “Left of Boom”] provides a snapshot of where the nation stands and guidance on where we need to go based on the roundtable and survey participant’s perspectives. With 23 years in law enforcement, I have worked, trained, and travelled with numerous smart and dedicated people that I can count on for support and information. Discussions that began with that network of professionals continue in this report, but should not stop here. Through engagement and discussions within and between agencies and the public, solutions can be created to stay left of boom.”

QuickSilver Analytics offers several products for the field screening of nitrate-based explosives. For further information, please contact Rodney Hudson at 410-676-4300.
